Passability boundary per rule (Wiedemann): filled marker = PASS, × = deadlock, dash-dot = predicted boundary
R1: fixed 0.30 m personal space → boundary 2.90 m
c_avail(L)
pedestrian threshold 0.30 m
vehicle needs c > 0.05
predicted boundary 2.90 m
S_cons: speed-dependent (0.05+0.05v) → boundary 2.90 m
c_avail(L)
pedestrian floor c0 = 0.05 m
predicted boundary 2.90 m
S_mod: speed-dependent (0.02+0.03v) → boundary 2.84 m
c_avail(L)
pedestrian floor c0 = 0.02 m
predicted boundary 2.84 m
S_lib: speed-dependent (0.01+0.02v) → boundary 2.82 m
c_avail(L)
pedestrian floor c0 = 0.01 m
predicted boundary 2.82 m
available clearance [m]
road width L [m]
