L = 3.0 m: pedestrians yield only when needed, then walk close past the slow vehicle
(a) L = 3.0 m: vehicle speed
vehicle speed [m/s]
time [s]
R1
S_cons
S_mod
S_lib
(b) pedestrian P1 speed: can drop to 0
P1 speed [m/s]
time [s]
P1 speed reaches 0 (yields)
then walks past the slow car
(c) L = 3.0 m: vehicle position
vehicle x [m]
time [s]
(d) observed passing events lie on the acceptance curves
lateral clearance at the passing moment [m]
vehicle speed at the passing moment [m/s]
S_cons acceptance
S_mod acceptance
S_lib acceptance
S_cons observed pass
S_mod observed pass
S_lib observed pass
